### **DETAILED ACTION**

1. Applicants' response filed on 11/23/2010 amended independent claims 1 and 5-6, and dependent claims 13-15, and 18-19, cancelled claims 2, 7, 10-12 and 16-17 and added new dependent claim 20. Applicants' amendments in light of their arguments regarding unexpected results are persuasive and, therefore, the 35 USC 103 rejection over Miyake in view of Yagishita from the office action mailed on 5/24/2010 is withdrawn. For the reasons stated below, claims 1, 4-6, 13-15 and 18-20 are in allowable condition.

### **Examiners Amendment**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

A) At the beginning of line 1 on page 1 of the specification:

Please add the phrase, "This application is a 371 of PCT/JP04/11377, filed August 6<sup>th</sup>, 2004.

***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance:

As evidenced by the prior art references of record, it is well known in the art for diamond-like carbon (DLC) contact surfaces to have lubricants comprising base oil and additives in between the contact surfaces. However, the lubricant and base oils between the DLC contact surfaces of the instant application are limited to specific synthetic base oils having a kinematic viscosity measured at 100°C of 3.5 to 5 mm<sup>2</sup>/s, a total aromatic content of 0 to 2 mass%, and a total sulfur content of not higher than 0.002 mass%. The additives are also limited to a narrow concentration of friction modifiers, salicylates, zinc dialkylphosphate and/or antioxidant. Furthermore, the composition as a whole is limited to no greater than 0.2 mass% of sulfur.

The combination of specific contact surfaces, base oil, and specific additives in applicants' compositions leads to superior friction properties especially over a lengthy duration of time when compared to the closest prior art wherein the prior art formulations not comprising the specific combination discussed above.

Applicants have compared their compositions to a known set of compositions which represent the prior art. From the tables of the instant specification it is evident that applicants' example formulations perform much better over a long period of time in terms of friction reduction and enhanced wear properties. Also, applicants showed that unexpected results were only shown within a narrow criticality of ranges for the base oil and additives. This was persuasive in overcoming the Miyake/Yagishita combination wherein the base oil and additives as recited in the claims with overlapping ranges were

Art Unit: 1771

disclosed, but applicants were able to narrow their ranges for these components and show the criticality of the ranges as claimed. These concentration ranges were not shown to be critical in the prior art. Finally, applicants filed a declaration signed by Shigeki Takeshima on 11/23/2010 which compared the friction modifier disclosed in Yagishita to the friction modifier recited in the instant claims and it is evident that the glycerin monooleate of the instant claims performs unexpectedly better than the sorbitan monooleate disclosed in Yagishita in terms of frictional properties when used in combination with the other additives recited in the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
